

COS 488: AC week 3 Q3

Dylan Mavrides

April 26, 2017

5/5

Here is the code I used. I modified "Example.java"

```
public class Example implements ComplexFunction
{
    public Complex eval(Complex z)
    { // {{(1 \over 1-z)*(1 \over ln(1-(1\over (1-z))))}
        Complex one = new Complex(1, 0);
        Complex d = ((one.minus(z).reciprocal()).log());
        return (one.minus(d)).reciprocal();
    }

    public static void main(String[] args)
    {
        Plot2Dez.show(new Example(), 512);
    }
}
```

Here is the image of the plot:
